                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                         This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (CHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompositions are drugs for prevention or treatment of diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and treduced side effects when applied alone or in combination with other drugs for therapy. The present sequence represents a protein molecule used in the method of the invention.
Cells producing antibody compositions including antibody fragments and fusion proteins with Fc domain of antibody, useful for prevention or treatment of cancer, immune diseases, circulatory diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MRAWTGSWRWIMLILFAWGTLLFYIGGHLVRDNDHPDHSSRELSKILAKLERLKQQNEDL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LILESQNWRYATGGWETVFRPVSETCTDRSGLSTGHWSGEVNDKNIQVVELPIVDSLHPR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (GHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 RRMAESLRIPEGPIDQGTATGRVRVLEEQLVKAKEQIENYKKQARNGLGKDHEILRRRIE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW22124 and AAW22125 represent the pig and human alpha 1-6 fucosyltransferases of the invention, respectively. The enzyme transfers fucose from guanosine diphosphate to the 6-hydroxyl group of the GlCNAc nearest to R in the receptor molecule: (GlCNAcbeta 1-2Manalpha 1-6) (GlCNAcbeta 1-2Manalpha 1-3) Manbeta 1-4GlCNAcbeta 1-2Manalpha 1-6) (GlCNAcbeta 1-2Manalpha 1-6) (GlCNAcbeta 1-4GlCNAcbeta 1-4GlCNAcbeta 1-4GlCNAcbeta 1-4 (Fucalpha 1-6) GlCNAcbeta 1-4 (Fucalpha 1-6) GlCNAcbeta 1-3) Manbeta 7.0 (pig) or 7.5 (human), and is stable over the pH range 4-10 after 5 hours at 4 degrees C. The optimum working temperature of the alpha 1-6 fucosyltransferases is 30-37 degrees C. A bivalent metal is not required for activity of the enzyme, and the enzyme is not inhibited

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 RRMAESLRIPEGPIDQGTATGRVRVLEEQLVKAKEQIENYKKQARNGLGKDHEILRRRIE 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                         The invention relates to a plant cell with an animal type sugar chain adding function, created by transforming a tobacco cell with a gene encoding an enzyme derived from an animal which can transfer a fucose residue to the reductive end acetylglucosamine residue of a sugar chain. The gene that is introduced into the plant cell encodes the enzyme apphal, 6-tucosyl transferase. The method of the invention is useful for the preparation of a glycoprotein having animal type sugar chain. The current sequence represents alphal, 6-fucosyl transferase amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

Lucosyltranaferases of the invention, respectively. The enzyme transfers fucosyltranaferases of the invention, respectively. The enzyme transfers fucosyltranaferases of the invention, respectively. The enzyme transfers fucosyltranaferases of the invention for the GloNAcoverse from guanosine diphosphate to the 6-hydroxyl group of the GloNAcoverse to R in the receptor molecule: (GloNAcovera 1-2Manalpha 1-6) (GloNAcovera 1-4GloNAcovera 1-4GloNAcover to give (GloNAcovera 1-2Manalpha 1-6) (GloNAcovera 1-3) Manbeta 1-4GloNAcovera 1-3 Manbeta 1-4GloNAcovera 1-3 Manbeta 1-4GloNAcovera 1-3 Manbeta 1-4GloNAcovera 1-4 Manalpha 1-6) (GloNAcovera 1-3) Manbeta 1-4GloNAcovera 1-4 Manalpha 1-6 Manaly, and is stable over the PH range 4-10 after 5 hours at 4 degrees C. The optimum working temperature of the 1-10 after 5 hours at 4 degrees C. The optimum working temperature of the 1-10 after 5 hours at 4 degrees C. The optimum working temperature of the 1-10 after 5 hours at 1-6 modification of segar chains, and as antigen for the production of antibodies recognising the enzyme. The antibodies can be used for the antibodies can be used for the diagnosis of cancer and other diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing

inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the mucleic acids into a host cell and culturing the cell co express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH77196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            424
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 424

                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                       The present invention describes an anti-human alpha 1-6 fucose fucosyltransferase (alpha 1-6 fucT, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucT by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucT antibody can be used for immunoassay. The present sequence represents the human alpha 1-6 fucT protein of residues 237 to 575, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                            121 HPVIGVHVRRIDKVGTEAAFHPIEEYMVHVEEHFQLLARRMQVDKKRVYLAIDDPSLLKE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              70 NEELKOLIDELMSDQ--LDKQSAMKLVQRLENDALNPKLAPEVAGPEPESMFESAPADLR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ---NYKKQARNGL------GKDHEILRRRIENGAKELWFFLQSELKKLK----

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an anti-human alpha 1-6 fucose fucosyltransferase (alpha 1-6 fucr, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucr by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucr antibody can be used for immunoassay. The present sequence represents the human alpha 1-6 fucr protein of residues 343 to 575, which is used in an example from the present invention.

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes cidentified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention.

Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             280 EVNDKNIQVVELFIVDSLHPRPPYLPLAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ
                                                                                                                                                                                                                                           Human, liver, cirrhosis, hyperlipoproteinaemia, hyperlipidaemia,
hypercholesterolaemia, coronary heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human genome-derived single exon nucleic acid probes useful for analysing gene expression in human adult liver

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; foetal liver; gene expression; single exon nucleic acid probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                        Peptide #1491 encoded by human foetal liver single exon probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 27; SEQ ID NO 26620; 639pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical egents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             280 EVNDKNIQVVELPIVDSLHPRPPYLPIAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ 339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                        Peptide #1448 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from humar breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        280 EVNDKNIQVVELPIVDSLHPRPPYLPLAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ 339

```
probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                              Single exon nucleic abid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         280 EVNDKNIQVVELIJIVDSLHPRPPYLPLAVPEDLADRLLRVHGDPAVWWVSQFVKYLIRPQ

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6291219

GENERAL INFORMATION:

APPLICANT: TANIGUCHI, Nacyuki

UOZUMI, Nactumi.

SHIBA, Tetsuo

YANGAIDANI, Shusaku

TITLE OF INVENTION: Alpha 1-6 Fucosyltransferase

NUMBER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS:

ADDRESSEE: Remyon & Kenyon

STREET: 1025 Connecticut Avenue, N.W., Suite 600

CITY: Mashington
                                                                                                                                                                                                             Indels

Sequence 63, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffals, R.
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve;
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26;
